

SHIFT For Outlook & SHIFT For Web

SECURE LARGE FILE TRANSFER, JUST LIKE EMAIL

For your personal secure network of contacts.

Send large files as easy as an email

Send large files directly via Outlook

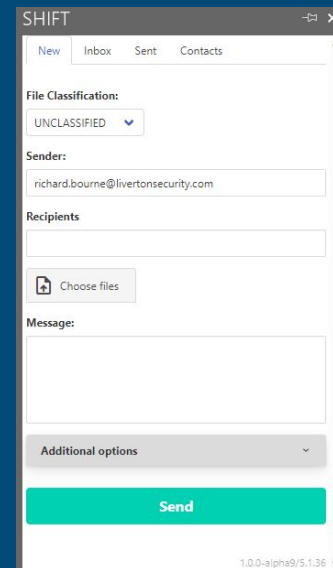

Vetted and Available on the Microsoft Marketplace

SHIFT is a secure large file transfer system that makes it easy to send files of any size securely from one person to another.

Know exactly where the file is at any point. Files are delivered to the recipient then completely removed from the SHIFT Network. Files can only be shared between authorised contacts.

Users can send large files to any authorised contact knowing that the files are secure, without any chance of interception or being left in the cloud.

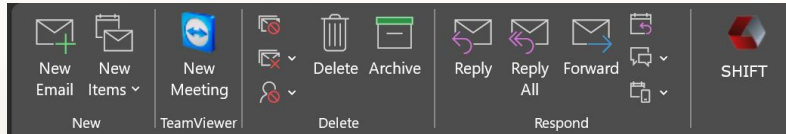

Senders are notified the moment the recipient receives the file, for full audit tracking and proof of delivery.

SHIFT File Send Outlook Panel

SHIFT Benefits

- Send large files securely via Outlook or your browser
- Send large files just like email attachments
- Sender gets proof of delivery
- Files are not only secure in transit, but can also be password protected
- Files are ALWAYS removed from the system once they have been delivered
- Files are virus checked

Access SHIFT via the Outlook ribbon

SHIFT Organisational Benefits

- Easy secure file transfer for users
- Traceability of all files sent
- No risk of files being left in the cloud
- Full accountability with file transfer history

Did You Know?

- Over 1 Exabyte of files are stored in the cloud
- Files can end up anywhere and are often not deleted
- SHIFT files can NEVER be left on the cloud
- This helps you meet GDPR requirements

Solution Highlights From Users

- SHIFT is used by NZ government agencies to transfer files securely
- 'Knowing exactly where our files are, while traversing the Internet, is critical to me'
- 'I love the notification when my file has been received by the recipient'
- 'Our users enjoy the simplicity of the Outlook interface'
